

# ACROVYN® CORNER GUARDS

External corners are some of the most 'vulnerable to damage' areas inside a busy building. With Acrovyn Corner Guards you can protect against damage effectively, with style and with the right angle and height. Acrovyn corner guards can be most effective when they are allowed to flex under impact, and the SM and SSM ranges provide this feature. For unusual angles and economy models use SCG, SCGv and the clear LG options.
